the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion (United Nations 1998).

There are a number of reasons why the number of children in the world is expected to increase. One of the main reasons is the high birth rate in developing countries. In many of these countries, the birth rate is still high, and the death rate is low, which leads to a high natural increase in the population.

Another reason is the increasing life expectancy in developing countries. As people live longer, the number of children in the world is expected to increase. This is because the number of children who survive to adulthood is increasing, and the number of children who are born is also increasing.

There are also a number of other factors that are expected to contribute to the increase in the number of children in the world. These include the increasing number of women who are working outside the home, the increasing number of women who are delaying marriage, and the increasing number of women who are having children at a younger age.

The increase in the number of children in the world is expected to have a number of significant impacts. One of the main impacts is the increasing demand for resources. As the number of children increases, the demand for food, water, and other resources is also increasing.

Another impact is the increasing demand for education. As the number of children increases, the demand for schools and teachers is also increasing. This is because more children are expected to attend school, and the number of teachers is not increasing at the same rate.

There are also a number of other impacts that are expected to result from the increase in the number of children in the world. These include the increasing demand for housing, the increasing demand for health care, and the increasing demand for social services.

The increase in the number of children in the world is a major challenge for the world. It is a challenge that requires the attention of governments, businesses, and individuals. We need to find ways to meet the increasing demand for resources, education, and other services, and we need to ensure that the world is a better place for all children.

There are a number of things that we can do to help address the challenge of the increasing number of children in the world. One of the most important things is to invest in education. We need to ensure that all children have access to quality education, and we need to ensure that the education system is able to meet the needs of all children.

Another important thing is to invest in health care. We need to ensure that all children have access to quality health care, and we need to ensure that the health care system is able to meet the needs of all children. This includes investing in primary health care, as well as investing in specialized health care.

There are also a number of other things that we can do to help address the challenge of the increasing number of children in the world. These include investing in housing, investing in social services, and investing in the environment.

The increase in the number of children in the world is a challenge that we cannot ignore. It is a challenge that requires the attention of all of us. We need to work together to find ways to meet the increasing demand for resources, education, and other services, and we need to ensure that the world is a better place for all children.
